SUMMARY

Backend-focused Software Engineer with experience building scalable SaaS platforms, distributed backend systems, and real-time applications using Node.js, Elixir, PostgreSQL, Redis, MongoDB, and AWS. Skilled in designing production-grade APIs, analytics pipelines, concurrent systems, and performance-optimized backend architectures.

EDUCATION

University of Lucknow

Bachelor of Technology — Computer Science & Engineering (AI) - CGPA **8.10 / 10**

Lucknow, Uttar Pradesh

Nov 2022 – Jun 2026 (Expected)

EXPERIENCE

Backend Developer Intern

Mar 2026 – Present

PurpleMerit

Bangalore - Remote

- Engineered transactional wallet and referral accounting workflows handling consistent earning events.
- Built and optimized APIs for analytics, user workflows, and platform operations with improved query efficiency and caching.
- Deployed and managed backend services on AWS (EC2, RDS), improving performance through query optimization, indexing, and caching.

Software Developer Intern

Jul 2025 – Sep 2025

StuFit Approach Pvt. Ltd.

Lucknow – Uttar Pradesh

- Developed scalable REST APIs using NestJS and PostgreSQL supporting 2000+ users across multiple core platform features.
- Reduced API response latency by ~30% through SQL query optimization, database indexing improvements, and backend performance tuning.

PROJECTS

Monetized Link Shortener SaaS - Node.js / Express / MongoDB / Next.js / AWS

- Built a production-grade **monetized URL shortener SaaS** with signed redirect sessions, multi-stage qualification funnels, referral attribution, and payout tracking.
- Designed a **secure redirect session engine** with staged validation, anti-abuse logic, and duplicate suppression (48-hour window) to ensure accurate qualified completion tracking.
- Engineered backend analytics and ledger systems to track **raw opens, funnel progression, and validated completions**, enabling synchronized wallet credits and payout visibility.

Real-Time Multiplayer Backend System - Node.js / PostgreSQL / Redis / AWS / WebSockets

- Built a real-time backend system handling 250+ concurrent users.
- Processed 600+ events/sec with ~1ms latency using Redis and in-memory optimizations.

AI-Powered Code Review System - FastAPI / RAG / Vector Embeddings

- Built an **AI-powered pull request analysis system** using FastAPI and RAG to identify potential code quality issues.
- Implemented **vector embedding retrieval pipelines** to enable contextual code search and automated review insights for submitted pull requests.

OPEN SOURCE

Contributor to **LangChain**

- Improved validation logic, inference workflows, and error handling across core modules in the open-source codebase.
- Added automated test cases and collaborated with maintainers through structured pull requests and code reviews

SKILLS

Languages: Java, Python, JavaScript, TypeScript

Backend: Node.js, Express.js, NestJS, Elixir (OTP, GenServer), Spring Boot, REST APIs, WebSockets, Microservices

Databases & Caching: PostgreSQL, MongoDB, Redis (Indexing, Query Optimization, Caching)

Cloud & DevOps: AWS (EC2, RDS, S3), Docker, CI/CD Pipelines, GitHub Actions, Git

Computer Science: Data Structures & Algorithms (500+ LeetCode problems), System Design, Concurrency, OOP
